Much has been written for using Google SketchUp in the building shell and its relationship to the environment or the site. Less help has been provided to interior designers who work every day with materials, textures, lights and colors.

Students need to know the available tools and how they can apply them in specific cases to this particular discipline. Fundamental concepts, ideas on how to create objects and interior spaces, tips and practical exercises are what this book offers. Rather than endless lines of explanatory text this hands-on book is a compendium of practical exercises that lead students to learn SketchUp from the perspective of the interior designer.

This book focuses on the fundamentals for the interior design field and promotes independent study. A series of four books offer separate courses progressing in

complexity. At the end of every course you will find practical exercises that will broaden your experience in the acquired knowledge. These resources enable students to think about how the knowledge can be applied to any situation. At the end of the four courses you will be able to express your ideas to others in a more efficient and attractive way.

"Training Course 2. Acquiring Intermediate Skills" may be applied to any discipline, but all exercises are designed especially for interior designers, stage designers and space planning focusing on the tools required to use Sketchup in those fields. One of the strengths of SketchUp is the way it allows users to maintain the geometry of a model under control. Having a disorganized model can be a real headache and can even cause the computer to operate very slowly. There are four indispensable tools if you wish to reach a good end: Groups, Components, Outliner and Layers.

Learn how to stay organized in SketchUp by using these tools. Learn how to control your model through the Outliner and access to the 3D Warehouse.
