Exploring Ethical Dilemmas in Pediatric Medicine:

Children are a vulnerable population. Their healthcare raises unique ethical questions that demand careful consideration and collaborative dialogue.

Pediatricians often find themselves grappling with moral decisions that impact their patients, families, and society as a whole. The Pediatrics Collections Ethics Rounds aims to examine these dilemmas and equip professionals with the tools to navigate them.

One such ethical dilemma is the issue of parental refusal of treatment. What happens when parents refuse life-saving measures for their child? How do we balance parental autonomy with the best interest of the child? Through case studies and expert insights, we will delve into the ethical, legal, and emotional dimensions of this dilemma.

Another significant topic is the use of medical resources in the face of scarcity. With limited availability of organs for transplantation, how do we allocate these resources in pediatric cases? Should age or medical urgency be the primary criteria? Together, we will explore the ethical considerations and societal implications involved in the allocation of scarce medical resources.
