This notebook is a concise synopsis of what an aspiring medical student is expected to know in the first/second years of his medical education regarding the human Head and Neck. The material is presented in the following order: Embryology of the Head and Neck, and then gross anatomy/ histology/anomalies of the skull, neck, face & scalp, mouth, pharynx &cervical oesophagus, nose & nasal cavity and larynx. At the end, there is multiple choice questions designed to test and expand the knowledge base of the students; even if they answer wrongly, they still learn. To complete your knowledge of the Head and Neck

Anatomy, please also read our book 'Notes on Human Anatomy: Cranial Nerves and Special Senses'. This notebook is not intended to replace the many fine textbooks of Human Anatomy already available. It is a distillation of what the authors felt the medical students should know. The anatomical descriptions have, not, only verified with the literature, but on the human cadavers.
