"As if God had made the innocency of so poor a creature to become such an  
admirable instrument for the sustention of man." -- Capitaine Richard Whitbourne

The rise of the modern bandage, in its many forms, was coupled by increased  
knowledge of human anatomy and physiology, which enabled physicians and  
nurses to designate specific bandages for unique applications to certain portions  
of the human body. Four unique bandage types have been popularly employed in  
nursing since the early nineteenth century: the roller bandage, the four-tailed  
bandage, the scultetus, and the triangular bandage.

These two image sources, bandaging and extinct birds, were headed in very  
different directions but at the last moment merged into the present project. It's still  
very satisfying wrapping, placing and pasting (rubber cement) these extinct-bird  
cut-outs around/in the stout sewn signatures/pages of the old bandaging manuals  
which more than double in size/depth. The two intersectional book-fonts are  
strangely similar and sympathetic. I hope to be able to find more copies of these  
books and continue the work: like I need another project. Uncommonly simple,  
elegant and direct. A silent plea but a vengeful prayer.
