Before you ask, yes, Los Angeles HAS transit options. But let me clarify it even further for you. The area has AMAZING transit options. However, not many would think that, believing the only way to survive in the city is to purchase a car. This is due to the massive freeway construction in the mid-1900s, plaguing the city since with false perceptions and traffic.

Los Angeles got its start with connecting railroads. Then a man named Henry Huntington came around and sprouted suburbanization with the Pacific Electric. At its peak, it had over a thousand miles, which is even more than the current NYC subway system! However, due to foreseen circumstances, the system shut down in favor of freeway construction.

But then it came back! Metro and Metrolink dominate any system in America with its relatively new infrastructure. However, ridership is quite low, which is why more need to discover this hidden gem in Los Angeles and its history, along with reasons why public transit is superior.

This book isn't inclusive to Los Angeles, however. This book takes examples of stories from other cities in the world dealing with planning problems, doubling as reasons why public transit is the clear winner of the fight for more efficient lives.

After immersing yourself in this perception changing book, you'll soon realize why more transit supporters are needed and how Los Angeles sets an example in transit.
